

# Android App Development Company in Bangalore

Fusion Informatics is a renowned Android app development company in Bangalore that have expert Android app developers who deliver your business goals through exceptional Android apps. With globally crossing around 80% of its market share, Androids continues to uphold its dominance in the market.

Creating and developing an android mobile application is undoubtedly a crucial aspect for the growth of any business; however creating the same is a complex act. The android body consists of multiple versions of OS in the market along with different sizes of screens making the development of android applications the task of experts.

## Fusion Informatics will make your vision into reality

We understand the importance of a successful business model and assure you that we at Fusion Informatics will make your vision into reality using state of the art technology and create high quality android applications for your consumers.

We will guide you from the start to the end, giving you the best possible solutions.

## Overview of Android Application Development

With the ever-growing market of smartphone devices, most of the organizations are adopting ways to incorporate mobile apps in their business flow, in order to enhance their market outreach. For a smooth development and success of a mobile app, the organization and developers have to initiate a detailed plan strategising the various types of processes to be used.

## Native android app development

A native app is a program that has been coded in a specific programming language, for devices having specific OS. For example, Objective C is used for iOS or Java for Android Phones. These apps use the OS features and other software tools that are installed on that platform. They also have access to various phones features such as camera, gallery, contact list etc. Mostly Native apps are compiled into machine code. These provisions help native apps perform the best in a mobile device.

The native app development method is easy and there are numerous resources available, but it might not be something everyone can comprehend since it is fairly complex.

The main features of a native app are:

- ☑ High degree reliability
- ☑ Simple but Fast Performance
- ☑ Better user experience
- ☑ Supports both online & offline transactions

## Hybrid android app development

A hybrid app is a program that is created using HTML 5, CSS and JavaScript and wrapped in a native container. This native container loads maximum information on the page as soon as the user navigates the application. There are plenty of native web frameworks available, which can help you build a hybrid app.

The main features of a typical hybrid app are:

- ☑ Faster app development
- ☑ Simple and easy to maintain
- ☑ Cross platform UI
- ☑ Integrate with device file system
- ☑ Less expensive app development and cost effective maintenance
- ☑ Single code management for multiple mobile platforms

# Our android app development approaches

✔ We believe in the idea of less is more and hence, make your app simple and attractive with user-friendly

layouts and easy navigation.

- ✔ We understand the importance of customer comfort and thus support multiple languages with localization and globalization.
- ✔ Like customer satisfaction is your main aim, your contentment is our goal. We study your target customers and based on the results create mobile applications to best suit them.
- ✔ We focus on the offline experience of users as well.
